Dear Idaho Public Utilities Commission:

I am an Idaho Power customer by default due to my location, but overall I am pleased with Idaho Power's commitment to clean energy. Nevertheless, there is room for improvement.

I care about clean energy because I am at the will and mercy of a power greater than any individual or company: nature. While we cannot control certain natural events, science has proven that we humans undoubtedly make an impact on the underlying trends as we see warmer summers and drier winters leading to a horrific record setting series of wildfire seasons.

2030 is an admirable goal for a coal free Idaho, but if we can truly recognize the opportunity that private solar is bringing to market, that goal could be cut in half.

Boise alone is exploding with population growth and development which is already creating a reservoir of alternatively sourced power that could help us reach the goal of coal free power even sooner. It is time for we humans to start new trends that consider our impact on nature and plan for a future without major emissions. Let us make that future arrive as soon as possible.

Thank you for your reading of my personal opinion, and again, for commitment towards a coal free Idaho.

Regards,  
Tyler Hanson

Dear Idaho Public Utilities Commission:

Thank you for saving money and decreasing our reliance on fossil fuels by proposing an early exit from coal powered plants in Nevada. I would also encourage you to clarify your commitment to clean energy by investing in Idaho's abundant solar potential and local energy storage projects instead of building massive power lines and new methane gas plants. Instead of stifling customer-owned solar through net metering, Idaho Power should partner with customers to achieve 100% clean energy for Idaho. It would be a shame not to especially since Idaho is blessed with so many good clean power options including abundant solar and wind power resources.

Regards,  
Ted Stout
